## Power Grid Data Extraction

## Peter DeWeirdt

August 23, 2017

In order to extract power grid data from IEEE common data sheets and import them into Gephi, follow these steps:

- 1. Open the IEEE common data using a text editor (textedit on mac). Copy all values under the "Branch Data" heading.
- 2. Paste in excel, then in order to separate the columns go to data-¿text to columns... check the tab, space, and comma boxes. Delete every column except the first two, and save the spreadsheet as a csv file.
- 3. Open R, set the directory to the one which has your csv file, and use the csv\_to\_graphml to convert your file to graphml format. Make sure to type your file name exactly as it appears in your directory.
- 4. Open the graphml file which has been exported to your directory in GEPHI. Be sure to import it as an undirected graph.
